Fools' Harmful Game

Jerry Fite

When one says in his or her heart, “*There is no God,*” he or she is a “fool” (*Psalm 14:1*). When peoples’ collective thought denies the existence of God, they form a corrupted culture. A corrupted culture does “*abominable works*” and self-serving leaders “*eat up... people as they eat bread*” (*Psalm 14:1b, 4*). When institutions begin to promote the godless theories of men in the name of knowledge and science, great harm will foolishly and needlessly occur affecting many.

Leaving God out of our knowledge, our society has digressed to theories that contradict and deny the truth revealed in God’s Word. For example, God in the beginning created man in His own image, “*male and female made He them*” (*Genesis 1:27*). Jesus doubles down on the truth of Genesis, reinforcing that from the beginning of creation, there have been just two genders (male and female), while establishing the permanency of marriage for future generations (*Matthew 19:4-6, cf. Ephesians 5:31*).

But individuals today have decided to play a fanciful game of make believe, where in a world untethered from God, they can be any gender they want to be.

Institutions such as government, science, universities, and health care have been inundated with such godless ideology causing chaos and harm to our society.

In the Spring of 2022, Texas Children’s Hospital based in Houston announced that it was discontinuing its “gender-affirming care,” after openly promoting it among doctors. Such care means they were encouraging puberty blockers, and hormone treatments during adolescence. A body has not yet matured from childhood to a sexually productive adult body, before young adolescents are deceived into thinking they can actually change their biological gender.

In September of 2023, the Senate Bill 14, prohibiting Texans under the age of 18 from accessing medical treatments like puberty blockers, hormone therapies and surgeries was passed into Law. Anticipating legal action, Texas Children’s Hospital had announced they were discontinuing their practice, but they deceitfully continued their practice throughout 2022 into 2023. A whistleblower from within exposed their deception in May of 2023.

Dr. Ethan Haim, who was completing his residency at Texas Children’s Hospital, knew that

children at the age of 11, 12, 13, 14, and 15 were being administered drugs prescribed by a Harvard-trained surgeon and assistant professor of Baylor College of Medicine which blocked puberty in transgender identified children. Ethan knew a trained endocrinologist from the University of Virginia and assistant professor at Baylor College of Medicine was performing transgender medical procedures on minors at Children’s Hospital.

Before children have matured into their adult bodies, their bodies are being permanently harmed for life. Deception permeates throughout the institutions in not only promising one can change one’s biological sex, but are so bent on creating their fantasy world they continue their child abuse after declaring they had discontinued their unlawful practices. The Department of Justice, backed by unlimited resources, after identifying the whistleblower, sought to intimidate the then intern, even before reviewing his charges. Federal Authorities came to his apartment on the day of his graduation, and in front of his pregnant wife, informed him that he was being investigated. Tomorrow, June 17, his indictment will be opened, as this conscientious surgeon learns what exactly his crime is.
